

Risk assessment

Performance of risk assessment

In fiscal 2022, the Swiss National Science Foundation (SNSF) conducted a comprehensive risk assessment that was approved by the Foundation Council. According to the completed risk assessment and in light of the measures put in place for monitoring and mitigating risks, no risks were identified in the past fiscal year that could lead to a lasting or substantial impairment of the financial situation of the Swiss National Science Foundation. In the SNSF's assessment, there is moreover no significant risk for the foreseeable future that would necessitate an adjustment in the book values of the Foundation's assets and liabilities.
